

# Business Cordless 905 Telephone

Cost-Effectively Combining the Power of Your Desk  
Telephones with the Convenience of “Cordless”

If you've ever wanted the freedom to make and take important business calls even when you're not sitting at your desk, there's a smart, affordable answer for you: the Lucent Technologies Business Cordless 905 Telephone.

The Business Cordless 905 Telephone is a multiline digital telephone that integrates with your Lucent communications system—giving you the same call-handling flexibility and control that you have with your desk

telephone, combined with the mobility of a cordless phone.

Best of all, the economical 905 Telephone comes with the same quality, reliability, and investment protection that's built into every Lucent Technologies product.

## The Smart Choice for Business Calling

Unlike consumer cordless or cellular phones, the Business Cordless 905 Telephone integrates fully with your **PARTNER**<sup>®</sup>, **MERLIN**<sup>®</sup>, or **MERLIN LEGEND**<sup>®</sup> communications system<sup>1</sup>. That means you can handle calls when you're not sitting at your desk and still use convenient system features such as hold, transfer, mute, conferencing, Caller ID, and message waiting notification.<sup>2</sup>

In addition, the multiline capacity of the Business Cordless 905 Telephone gives you the ability to manage multiple calls simultaneously—up to three outside calls and two intercom calls.

So, you can move around your office and still be “reachable” to customers, coworkers, and other important callers.

The Cordless 905 Telephone offers the exceptional performance of digital 900 MHz technology, with a greater range and better security than older technologies provide. And unlike cellular phones, the Cordless 905 phone does not add air charges and monthly fees to your communications budget.

## A Compact, Cordless System

The Business Cordless 905 Telephone includes a lightweight yet durable handset and a combination base and charger; no additional base stations or antennas are required. Up to four 905 telephones can be in use in the same coverage area at the same time.

The easy-to-use Cordless 905 handset includes an LCD display, and buttons clearly marked with icons for accessing lines, intercoms, or features.

The handset base and charger includes a spare battery-charging garage; a page/handset locator; and LEDs to indicate when you have a message waiting<sup>3</sup>, when the handset is charging or in use, and when the spare battery is charging.

## Clear, Reliable Communications

The Business Cordless 905 Telephone provides the same clear, digital voice quality that you get with your corded **PARTNER**, **MERLIN**, or **MERLIN LEGEND** telephones, for maximum communications reliability on every call.

The Cordless 905 Telephone uses 900 MHz radio technology and can operate on any one of multiple channels. When switched on, it locates the clearest channel available, further assuring voice and reception quality.

The handset battery provides up to six hours of talk time and up to 48 hours of standby, helping ensure that the

phone is up and working when you need it. For convenience, the battery fully recharges in only four hours. In addition, the spare battery-charging garage allows you to always have a backup battery charged and ready to use—further helping ensure that you can always be reachable.

## Protecting Your Investment

The Business Cordless 905 Telephone comes with a one-year warranty, and a choice of post-warranty maintenance coverage is also available.

A company including Bell Laboratories and former manufacturing units of AT&T, Lucent Technologies is a leader in delivering communications solutions for businesses—including “cordless” solutions. That means the affordable Business Cordless 905 Telephone is backed by all the quality and reliability that the Lucent Technologies name stands for.
