

PC Administration for PARTNER[®] Systems

The Software That Lets *You* Administer Your Telephone System

Now, you can turn your computer into a powerful administrative tool, with new PC administration software for **PARTNER**[®] Systems.

It provides a clear picture of your programming options, to make installation and feature programming quick and hassle-free.

This Windows[®]-based software application lets you perform telephone system programming right on your PC, for easy “do-it-yourself” administration. It’s a one-time software investment that *eliminates* the need to call and pay for a service technician visit every time you want to update or change your system programming.

Easy, System-Wide Programming

The user-friendly PC administration software lets you program your telephone system simply by pointing and clicking with your mouse on the program screen. The fields make it quick and easy to duplicate programming from one **PARTNER** phone to the next, rather than having to *physically* program individual phones one by one.

Plus, the administration software allows you to store the information for easy retrieval whenever you need to review how you programmed the system and phones.

Adaptable as Your Needs Change or Your Business Grows

This flexible software was specifically developed by Bell Laboratories to allow you to make moves, additions, and changes quickly and easily, with minimal disruption to your phone service and your business.

That means you can reprogram your system yourself to accommodate changing business needs. For example, the software lets you assign new features system-wide—or reprogram an individual telephone to change the user’s calling privileges.

If you need to add more phones to your system—to handle a growing staff and increased call volume—the software also lets you program the new phones from your desktop, with less time and effort and with no programming codes to remember.

It ensures that your **PARTNER** telephone system is working and helping you serve your callers' needs, with less downtime and no need for a service technician visit whenever you want to make a simple change.

Complete System Backup, for Added Security and Ongoing Service

The software is also ideal as a *backup* for your telephone system, to ensure fast, easy reprogramming in the event of a power disruption caused by lightning or other natural occurrences.

With PC administration software, all your **PARTNER** system programming can be backed up on a floppy disk and be reinstalled quickly and painlessly. So, you can be back in business and serving your callers in almost no time at all. And a “natural disaster” doesn't have to cause a communication breakdown between your business and your customers.

So Smart, Why Do Without It?

This flexible PC administration software works with the **PARTNER Plus System**, the **PARTNER II® System**, and **PARTNER Advanced Communications System**. (Not compatible with the basic **PARTNER System**.)

Using a Windows-compatible computer and a **PARTNER 34D** telephone, the software enhances the applications available through the **PassageWay® Direct Connection** module and software.

SYSTEM REQUIREMENTS

- **PARTNER Plus System** R4.1 or greater, **PARTNER II System** R4.1 or greater, or **PARTNER ACS**
- PC administration software
- Basic **PassageWay Direct Connection** hardware module and software
- Available serial port
- **PARTNER 34D** display telephone
- Minimum 486 processor
- Windows V3.1 or higher, Windows for Workgroups V3.1 or higher, or Windows 95²
- Minimum 4 MB of RAM and 4 MB hard disk space
- Windows-compatible VGA or better adapter monitor
- Windows-compatible mouse or trackball

And because the PC administration software lets you perform the kind of system administration that businesses most commonly need—such as moves and simple changes—you can minimize the cost of service visits and disruptions.

So, ask your Lucent Technologies representative about the “do-it-yourself” advantages of PC administration for **PARTNER®** Systems today.
